# CORNER CADDY INSTALLATION

## Caddy Location

Hold the caddy in the corner and adjust it to a comfortable height. The picture to the right shows the most common locations for the Tall and Regular height caddies.

Mark the shower wall panel at the top of the caddy for reference and remove the caddy.

## Drilling Holes

Position the plastic corner bracket about 1 1/4” below where the top of the caddy will be. Mark through the holes in the bracket as seen in the picture to the right.

Drill 1/4” Clearance Holes through the Onyx Panels at an angle towards the studs as shown in the picture.

## Attaching the Bracket

Attach the bracket to the studs in the walls using the 2 1/2” screws. Tighten just enough so that the bracket is snug in the corner - be careful not to over-tighten.

## Mounting the caddy

Apply Onyx Adhesive silicone to the back of the shower caddy. A small bead along the edges and two “globs” of silicone per side is sufficient. Apply the adhesive silicone slightly away from the outside edge so that it will not press out when the caddy is installed.

Hang the caddy on the bracket and gently slide it into the corner against the two walls.

## Securing & Sealing

After the caddy is installed, secure it in place with masking tape until the adhesive silicone starts to cure (usually 15 minutes to an hour).

Remove the tape and apply the Color Matched Seamfill to the edges of the caddy.

## Preventing Trapped / Longstanding Water

If left for long periods of time, wet soap bars, or any shampoo bottles that can trap water under them, can cause water penetration. If this happens, simply move the item to allow that area to “dry out”. Move and clean under these types of items routinely.
